a d	LIGHTING ARRANGEMEN	16 NT	13 13 14 15	#1 END 600 - 1600 SERJES BT
<i></i>				

NOTE: Refer to instructions for performing tests on Page 2 if needed.

EMERGENCY LIGHTING DURATION TEST RECORD **All Single-Level Coaches**

INSTRUCTIONS:

Before beginning, verify the following: Any/All emergency lighting ballast replacements have been completed.

- 1. The emergency lighting ballasts have been charging for at least 30 minutes.
- 2. Ensure the main lighting circuit breaker is ON, all individual light switches are ON, and when equipped, the emergency light CUTOUT SWITCH in the circuit breaker control panel is in the NORMAL position.
- 3. Varify all regular inside coach lighting in ON.
- 4. Turn the main lighting circuit breaker OFF.
- 5. Verify all emergency lighting comes ON.
- 6. Verify emergency lighting remains ON for 60 minutes. If at any point in the 60-minute period the emergency lighting stops functioning altogether, record its duration on the MR1 form, then refer to the NOTE that follows Step 10.
- 7. At the end of 60 minutes, record the results in the spaces provided on the record sheet.
- 8. Turn the main lighting circuit breaker ON after testing /recording is complete.
- Ensure the record sheet is fully completed, then submit it to the Foreman on duty. The completed record sheet is to be included in the PM completed work order and control forms package.
- 10. Charge the emergency ballasts for 30 minutes.

NOTE: If any of the steps fail to perform as expected, consult the OEM manual as needed, and troubleshoot/repair/replace parts. If all the emergency lighting fails early, begin by doublechecking that the ballast actually did charge a full 30 minutes prior to testing. Retest. Provide PM comments or open a Service Order, whichever is applicable.

COACH COUPLER INSPECTION REPORT

For any maintenance and/or replacement

Task	Description	Other reference	Front	Rear

PASS FAIL

19	 Charge system as necessary to maintain Freon level 1/2 full on lower sight glass. (Nominal: 270 - 275 psig) 		
20	Cover condenser coils with cardboard to cause #2 condenser fan to operate. (Nominal: 250 psig)		
	START PRESSURE: 270		
21	. Restrict compressor suction valve to lower system pressure, until shutdown. (Nominal: 20 to 25 psig)		
	SHUTDOWN PRESSURE:		
	REOPEN SUCTION VALVE		
22	Block condenser completely to cause system to go into modulation, if necessary heat coach prior to attempting modulation to cause a higher pressure. (Nominal: 380 - 400 psig) MODULATION PRESSURE: Observe that modulation occurs and continues to operate in modulation until a pressure of 330 +/-10 psig is reached. (When modulation occurs you will see a sudden drop in pressure around 400 psig).		
23.	Block condenser completely to cause system to shutdown on high pressure, if necessary heat coach prior to attempting shutdown to cause a higher pressure. (Nominal: 425 - 430 psig) SHUTDOWN PRESSURE: 425		
	CAUTION: DO NOT CONTINUE IF PRESSURE GOES ABOVE 435 psig. NOTE: Do not use discharge valve to raise pressure.		
24.	Record the loading pressure and the unloading pressure for each head. (place a heat load on the coach and use suction valve)		
	1st stage unloader LOADED: (Nominal: 63 - 65 psig) 2nd stage unloader LOADED: (Nominal: 68 - 70 psig) 1st stage unloader UNLOADED (Nominal: 51 - 55 psig) 2nd stage unloader UNLOADED (Nominal: 56 - 60 psig)	-13	_
25.	Check system for moisture at the filter dryer sight glass indicator, if indicator is pink in color, or the sight glass indicates moisture, checked failed. If failed change the filter/dryer.		
	Between Nov 1st through May 1st take oil sample (Acid Test) use test kit. Follow the oil sample kit instructions to determine condition of the compressor oil and record result.		
	MARGINAL PASS FAIL N/A		
27.	Wash condenser compressor unit and associated piping.		
	pier .

		PASS	CAH

28	Using the DTE (Diagnostic Test Equipment) raise the temperature in the coach so that Full Cool will be called for. (>75°F)
29	Remove the DTE and observe that the coach responds properly moving from Full Cool to Partial Cool. Verify that the modulation valves deenergize. (Appox. 74°F)
30	When the Coach gets cooler Reheat is energized. Verify 1st stage OH heat contactors close. (Approx. 72°F)
31	The Coach should continue to cool until Partial cool drops out. Verify Compressor contactor is Open. (Approx. 71°F)

REFRIGERANT USAGE AND LEAK REPAIR RECORD

The EPA, in accordance with Section 608 of the CLEAN AIR ACT, requires record keeping of refrigerant usage and leak repairs for comfort cooling systems with a charge of 50 pounds or greater. All single level coaches have approximately a 55 pound charge. Kawasaki coaches have a 33 pound charge in each end. Any leak with an annual leak rate greater than 15% of system capacity must be repaired.

Has the system been charged in the past 12 months?

If yes, what was the percentage of system capacity charged?

What is the percentage of system capacity charged for this repair?

Total percentage charged past 12 months
